

TA3 TAPE DISPENSER

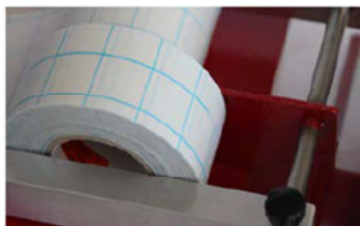

1.
Loosen the knurled screw and slide the tape holder outwards.

2.
Place the tape roll in the seating tray with the tape end to the back. Peel back approx. 15 cm of the release liner and feed the tape into the separator.

3.
Feed the tape below the seating tray, over the support rod and up to the cutting edge.

4.
Secure the roll with the tape holder and tighten the screw. The tape can be cut off with a light diagonal, downward motion onto the cutting blade.

BLADE REPLACEMENT

Remove the three front screws. Carefully remove the used blade. Insert the new blade onto the cutting edge with an overlap of 0.5 mm. Insert the screws and tighten. Notice: Ensure that the blade does not have an overlap of more than 1mm!

→ SAFETY INSTRUCTIONS:

Exercise extreme caution near the blade holder and when replacing used blades! Serious injury may occur due to mishandling or inattention. Always grasp the tape behind the tape holder and not near the blade. Fold down the safety bar when the TA3 is not in use or when transporting.
